Assignment 6.3

Sheikh Muhammad Sabih (2303.khi.deg.010)
Mohammad Safi (2303.khi.deg.023)
Huzaifa (2303.khi.deg.016)

Sphinx command line command

sphinx-apidoc -o <output_dir> <module_dir> [exclude_patterns] [options]

- **sphinx-apidoc**: this command is use to invoke sphinx-apidoc and automatically generates reStructuredText files.

- **<output_dir>**: mention the output directory where you have to store the document

- **<module-dir>**: mention the directory of your python file of whom you want to generate the documents

- **[exclude_patterns]**: mention the directory of your python file of whom you don't want to generates the documents

- **[options]**: (optional) This section allows you to specify additional options for the documentation generation. Some commonly used options include:

  -f: forces the regeneration of all files, even if they already exist

  -e: generates separate files for each module or package, rather than combining them into one file

  and others

flag that should be use for implicit namespaces in project

-F and -implicit namespaces in place of [options]
